README.md

Terraform Simple Service Account module

This submodule creates a service account and optionally grants specified roles on the project.

Usage

Basic usage of this submodule is as follows:

```
   project_id    = "<PROJECT ID>"
   name          = "sa-name"
   project_roles = [
     "roles/compute.imageUser",
     "roles/compute.networkUser"
   ]
 }
```

Inputs

Name	Description	Type	Default	Required
description	Default description of the created service accounts (defaults to no description)	`string`	`""`	no
display_name	Display name of the created service accounts (defaults to 'Terraform-managed service account')	`string`	`"Terraform-managed service account"`	no
name	Name of service account	`string`	n/a	yes
project_id	Project id where service account will be created	`string`	n/a	yes
project_roles	Roles to grant the SA in specified project	`list(string)`	`[]`	no

Outputs

Name	Description
account_details	Service account id and email
email	Service account email
env_vars	Exported environment variables
iam_email	IAM format service account email
id	Service account id in the format 'projects/{{project}}/serviceAccounts/{{email}}'
